

# Formulation Made to Support Your Immunity

-  Boosts Immunity & Physical Fitness
-  Supports Respiratory Health
-  Helps with Environmental or Seasonal Allergies

**JADEIMMUNE**

Patent pending No. 202110998897.1

Jadeimmune™ based on a traditional formulation, containing a complex extract of *Astragalus* root, *Atractylodes* rhizome and *Schizonepeta* aerial part.

## Why Choose Jadeimmune™

Utilizes powerful adaptogenic herbs; Good solubility and taste; Suitable for a wide age demographic, kids and adults; Bidirectionally regulates the immunity; Effective 100% plant-based herbal formulation; Scientifically backed to be safe and effective.

## Supported forms:

Powder, Tablets, Capsules,  
Ready to Drink applications

## Dosage:

750 mg/day

## Applicable to:

Kids and Adults looking to improve their Immune Health and daily Immune Helth

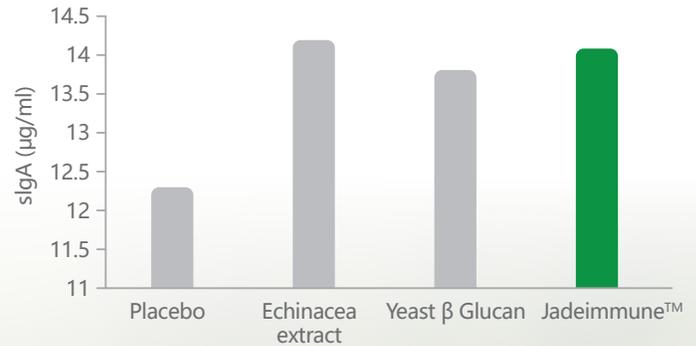

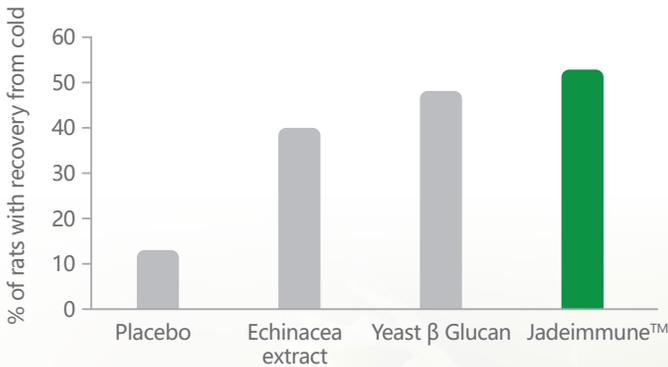

## Pre-Clinical Studies on Immune Support

We have run a pre-clinical study on the effect of Jadeimmune™ on health mice. IgG plays an important role in the immune response, activating complement in the humoral immune system.

The result showed that Jadeimmune™ could increase the expression of IgG by 35% to boost immunity, compared with normal. It is superior to the yeast β glucan and yeast ferment groups.

Another pre-clinical study in the upper respiratory infection rats has shown that Jadeimmune™ can help relieve the fever of a cold, increasing the percentage of recovery from cold by 3 times. In addition, Jadeimmune™ can increase the expression of sIgA by 15% which will enhance the body immunity. It is superior to the Echinacea angustifolia root extract and yeast β glucan groups.

## Human Clinical Study

We are currently running a 90-day, single-center, open-label human clinical study to investigate the efficacy and safety of Jadeimmune™ at a daily dose of 1,500 mg in boosting immunity. 30 healthy adults were enrolled, the changes of biomarkers in blood and saliva will be detected.

SF-36 questionnaire was used to follow up the quality of life during this clinical trial. The study will be expected to be completed by the end of 2021.
